

Installation Guides

Master Flash® Residential

1. Select an appropriate Master Flash® Residential with a pipe range that goes below and beyond fitting. If necessary, use the lines clearly shown on the flashing to trim an opening 20-30% smaller than pipe diameter using pliers and the pull tab.
2. Finish any adjustments to the flashing opening by hand.
3. Apply sealant on the underneath of the metal base.
4. Slide the Master Flash® Residential down the pipe, using a non-petroleum-based lubricant to ease installation.
5. If using, cut shingles to fit on top of the flashing, allowing the flashing's metal base to sit on top of the roof tiles.
6. If needed, secure and fasten the metal base to the roof.
7. Install tiles at the sides of the Master Flash® Residential.
8. Complete installation of roof tiles over the Master Flash® Residential's metal sheet base.
